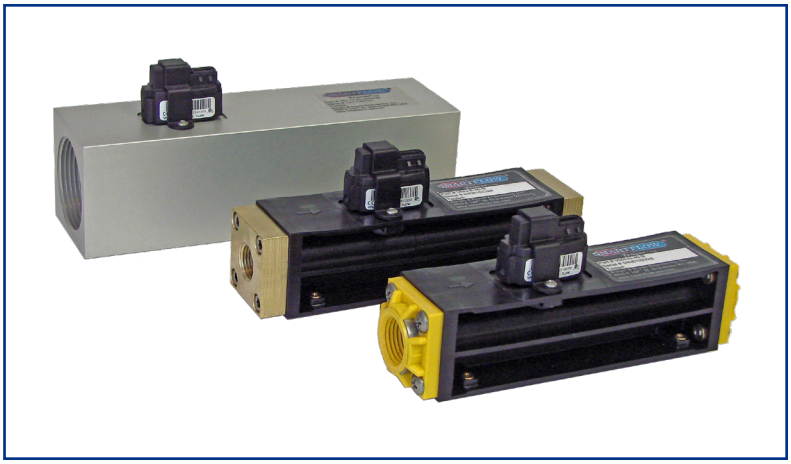
TRACER®$_{VM}$ BASE FLOWMETERS



General Description

The **Tracer$_{VM}$ Base Flowmeter** is a non-display sensor that provides a 0.5 to 3.5V output for process flow rate (0.5 to 4.1V for 1-18 LPM model) and a 0.5 to 4.1V output for process temperature.

Vortex sensor technology is highly accurate and repeatable without moving parts. Flow reading is direction specific. Refer to the arrow on the body for correct installation.

Connection to the process is made using standard pipe threads in NPT or BSP from 3/8" through 1-1/2". Flow body materials are corrosion-resistant brass, nylon, anodized aluminum and stainless steel. Options are based on thread size, see page 2 for details.

The flowmeter is designed for use in industrial water applications such as injection mold cooling or filter and pump monitoring.

Benefits

- No moving parts for reliable operation
- Flow and Temperature Sensors in one unit for compact installation
- Quick temperature response from direct media contact
- Economical and versatile construction with corrosion-resistant materials
